JAVASCRIPT   ★★☆☆☆

Excel Macro   ★★☆☆☆

EXPERIENCE

As a Student Assistance Scholar assigned to the school clinic, I conducted health assessments, including measuring height, weight, and calculating BMI, and monitored vital signs such as temperature and oxygen saturation (O_2Sat). I accurately encoded and maintained patient data during the Annual Physical Examination (APE) and ensured efficient, organized examination processes while maintaining data confidentiality. Though I do not have formal work experience, I have developed strong technical and operational skills through practical contributions and project work. These include creating a Point of Sale (POS) system for a grocery store as a capstone project, developing simple websites such as a movie database and a coffee shop site, and automating routine reporting with Excel macros using Visual Basic for Applications (VBA). I also designed professional PowerPoint decks and marketing materials using Canva, managed product inventory, and assisted with event videography and simple editing using CapCut and Canva.
